Index	Failed Elements	Action
General > ARIA attributes should be valid. Disabilities Affected: Visually Impaired Cognitive & Learning Motor Impaired Blind Recommended Action: ARIA (Accessible Rich Internet Applications) attributes enhance accessibility, but they must be used correctly. Invalid ARIA attributes can confuse assistive technologies, leading to a poor user experience.		
1	<pre><div class="slick-slide slick-current slick-active" data-slick-index="0" aria-hidden="false" tabindex="0" role="tabpanel" id="slick-slide00" aria-describedby="slick-slide-control00"></pre>	AI Insights > Visit Page >
Clickables > Link should have a valid attributes Disabilities Affected: Visually Impaired Cognitive & Learning Blind Recommended Action: Links are a critical part of web navigation, and ensuring they have valid attributes is essential for both functionality and accessibility. The most important attribute for a link (<a>) is the href attribute, which specifies the destination of the link. Invalid or missing attributes can create broken links, confusing navigation, or an inaccessible experience for users, especially those relying on assistive technology.

Clickables > Buttons should be labelled properly

Disabilities Affected:

Visually Impaired | Cognitive & Learning | Blind

Recommended Action:

Buttons are essential for user interaction, and labeling them correctly is crucial for both accessibility and usability. Proper button labeling ensures that users, especially those relying on screen readers or assistive technologies, can understand the purpose of a button and interact with it effectively.

8

```
<button class="nexts slick-arrow" style="display: flex;">...</button>
```

[AI Insights >](#)[Visit Page >](#)

CSS Selector

```
#tab4 > div:nth-child(2) > div:nth-child(1) > button:nth-child(2)
```

9

```
<button class="prevs slick-arrow" style="display: flex;">...</button>
```

[AI Insights >](#)[Visit Page >](#)

CSS Selector

```
#tab4 > div:nth-child(2) > div:nth-child(1) > button:nth-child(1)
```

Forms > All Form fields should be labelled properly.

Disabilities Affected:

Visually Impaired | Cognitive & Learning | Blind | ADHD

Recommended Action:

Labels help users understand what information is expected in each form field, especially for people using screen readers or other assistive technologies. Each form field should have a label that clearly describes its purpose.

10

```
<button role="button" class="owl-dot active"><span></span></button>
```

Document > Element must have a valid landmark. Disabilities Affected: Visually Impaired Cognitive & Learning Motor Impaired Blind Recommended Action: Landmarks help users, especially those relying on assistive technologies like screen readers, navigate a webpage more easily. Using proper HTML5 semantic tags or ARIA roles for specific sections (e.g., navigation, header, footer, main content) ensures better accessibility.

Document > Meta viewport allows display scaling of at least 200%. Disabilities Affected: Visually Impaired Elderly Recommended Action: The <meta> viewport tag is used in web development to control the layout and scaling of a webpage on different devices, especially mobile devices. It helps ensure that the content is displayed appropriately across different screen sizes and resolutions. One important consideration for accessibility is ensuring that users can zoom in on the page by at least 200%. This is especially crucial for users with low vision who may rely on zooming to read content. By default, many websites restrict zooming, which can negatively impact users who need to zoom in on content. Therefore, it is important to configure the viewport to allow a zoom level of at least 200%.

Bridge the accessibility gaps with manual accessibility audit!

Automated scans can identify many common accessibility violations, but some of WCAG 2.1, and 2.2 criteria can't be reliably tested with automation alone. That's the reason why we offer expert human or manual accessibility audit to fill those gaps & provide website accessibility and remediation insights.

[Request Manual Accessibility Audit >](#)
